SUMMARY

Detail-oriented AEO with 8+ years of experience including data management, automation, and reporting within a government organisation and turning complex datasets into actionable insights. Proficient in Python, SQL, Tableau, and Power BI statistical analysis, hypothesis testing, and data visualisation. Proven ability to communicate findings to non-technical stakeholders. Currently based in the UK with full right to work. No sponsorship required.

SKILLS

Languages & Databases: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, MySQL, BigQuery

Visualisation & Reporting: Tableau, Power BI, Microsoft Excel (Power Query, Pivot Tables)

Analytics: EDA, Data Wrangling, Statistical Analysis, Hypothesis Testing, A/B Testing, Customer Segmentation, Feature Engineering, ETL Pipelines

Tools: Git, GitHub, Streamlit, Jupyter Notebook

EXPERIENCE

Agriculture Extension Officer | Government of Telangana, India

Apr 2018 – Apr 2026

- Managed and maintained structured agricultural datasets covering a 12,000-acre block area—including crop type, acreage, sowing patterns, and harvest records—ensuring data governance, accurate digital uploads and data integrity across government MIS portals and dashboard reporting.
- Designed and maintained a 9,500+ record beneficiary database for Rythu Bandhu and Rythu Bheema welfare schemes using SQL, Python and Advanced Excel; performed data wrangling, eligibility validation, deduplication, and reconciliation, analysing root cause analysis reducing data errors by approximately 35%.
- Automated repetitive data entry and report-generation workflows using Python scripts and Excel Macros, saving approximately 8 hours of manual effort per month and improving reporting accuracy.
- Communicated data-driven findings and scheme performance summaries to district-level non-technical stakeholder management, translating complex datasets into accessible reports and visual summaries.

PROJECTS

UK-Retail-SQL-business-analysis

[GitHub](#)

Technologies: SQL, Time Series Analysis

- Analysed 500,000+ orders from a UK-based online retail dataset to uncover insights into customer behaviour, product performance, sales trends, and revenue drivers.
- Performed cohort analysis, revenue segmentation, and time-series trend analysis to identify peak trading periods and top-performing product categories.

Walmart Black Friday Sales Analysis

[GitHub](#)

Technologies: Python, NumPy, Pandas, Matplotlib, Seaborn

- Analysed 100M+ sales transactions to segment customers by demographic and purchasing behaviour, developing a targeted marketing framework to identify the highest-value revenue opportunities.

Netflix Streaming Trends EDA

[GitHub](#)

Technologies: Python, NumPy, Pandas, Matplotlib, Seaborn, Data Wrangling, EDA

- Conducted end-to-end exploratory data analysis on Netflix content data to detect a structural market shift from films to TV series, providing a data-driven content investment recommendation.

Jamboree-Education-Linear Regression

[GitHub](#)

Technologies: Python, NumPy, Pandas, Scikit-learn, Linear Regression

- Built a linear regression model on 500 student records to predict graduate admission probability; identified CGPA and research experience as the most statistically significant predictors.
